EXHIBITION STAND STRUCTURES (USING SHELL-CLAD)

While we've been focussing on cladding shell schemes throughout Europe, our Australian agent, Synergy Design, has taken Shell-Clad into an exciting new arena.

They have been building what, at first glance, look like bespoke stands. This is achieved using a combination of Octanorm (as a skeleton structure), Shell-Clad (as a fixing medium) and dybond/renobond (to create rigid walls).

The results have been truly striking and are proof of the flexibility of the Shell-Clad system.

These structures are not the domain of the exhibitor installer, but they are a fabulous alternative to pure bespoke build... and at a fraction of the cost.

As you can see, they look stunning and are relatively easy to install for a professional exhibition company. Most of the components are modular and can be returned to "stores" after the event, making Shell-Clad structures a highly viable alternative to a traditional bespoke build.

The ultimate flat-pack is here!

For further details please contact the Shell-Clad sales office on 01825 750 699 or email them at impact@shell-clad.com
